NET METERING
(General Services Classification)

SCHEDULE NM (Rate Title or Number)	Company Rate Code
---	-------------------------

APPLICABILITY
 For service to customer-generators where a part or all of the electrical requirements of the customer-generator can be supplied from an eligible energy resource, as the same is defined in § 40-9.5-118, C.R.S. (2008) and § 40-2-124, C.R.S. (2015), as the same may be amended, and includes solar, wind, biomass, or hydropower generating facilities. The net metering system must be located on premises that are owned or controlled by the customer-generator, and it must also be connected in parallel with the local distribution system of the Association. The system must be intended to offset part or all of the customer-generator's electrical requirements for electrical energy at the same location, and it must not be used to offset electric consumption at another location.

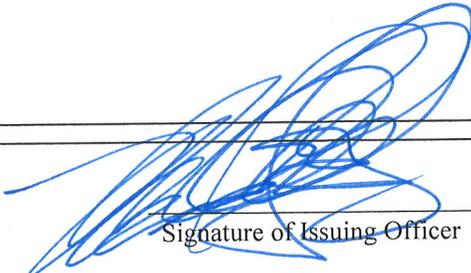

AVAILABILITY
 To customer-generators described above who receive service from the Association under any rate schedule, provided that the customer-generator meets the Association's interconnection standards and insurance requirements.

NET METERING
 Net metering is defined as measuring the difference in an applicable billing period between the electricity supplied by the Association to the customer-generator and the electricity generated by the customer-generator and delivered to the Association at the same point of interconnection.

NET METERING
(General Services Classification)

SCHEDULE NM (Rate Title or Number)	Company Rate Code
---	-------------------------

<p>2. <u>Engineering Review.</u> All customer-generators must have an engineering review and approval for a net metered interconnection at the proposed location and the Association may collect from the customer-generator all expenses involved in the review and shall collect all expenses associated with any necessary system upgrades pursuant to the Association’s Line Extension Policy. The system must be designed to offset part or all of the customer-generator’s gross electrical requirements, however the Association will provide up to 50% leeway when making this determination. Systems generating more than 150% of the customer’s gross historic usage from the previous 12 months will not be approved. If 12 months of usage is not available, the average of the available months will be used (minimum of 4 months). If 4 months of historic usage is not available, a standardized calculation will be used to approximate the appropriate system size based on the home size, the source of space heating and the source of water heating. Other major electric usage greater than 2 kW will be considered with proof of purchase.</p> <p>3. <u>Billing.</u> The billing period to be used under this schedule shall be the customary billing period for ordinary residential or other service rate schedules. In any billing period where the electricity supplied to the customer-generator by the Association exceeds the electricity generated by the customer-generator, the Association will bill the customer-generator for the net electricity consumed per the terms of the rate schedule. In billing periods where the electricity generated by the customer-generator exceeds the electricity supplied by the Association, the customer-generator is required to pay only the base charges and minimums that the customer would have otherwise paid under the applicable rate schedule.</p>	NM 14

During the April billing period of each year, the Association shall pay a credit for excess generation to the customer-generator equal to the Association's avoided cost, which shall be equal to the Association's avoided wholesale energy charge from the previous year times the excess kilowatt hours generated by the customer in the previous twelve months.

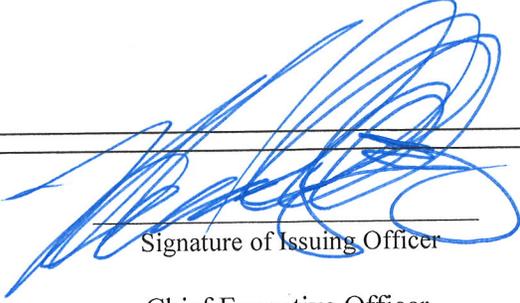

4. Safety and reliability. The design and installation of the customer-generator's net metering system must comply with all applicable laws and regulations and shall meet all current and future safety and performance standards established by the Association's Interconnection Standards, National Electric Code, the Institute of Electrical and Electronics Engineers, and Underwriters Laboratories, Incorporated and be approved by the Association.

ASSOCIATION PROVIDED LOAD CONTROL SIGNAL

The Association will provide a load control signal wire originating at the customer's meter at no charge to customers controlling ETS heaters, water heaters or other large electric loads. A charge, or close, signal will be active only during off peak hours. The charge, or close, signal will be active a minimum of 12 hours each day. There will be no more than 7 continuous hours of daily load curtailment with an open signal.

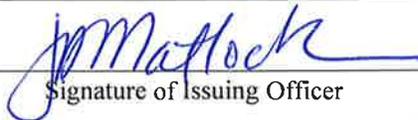

If the customer requests to be taken off of the time of use rate, the General Services Single Phase (Schedule A, Rate 10) or General Service Demand Single Phase (Schedule GSD, Rate 10) tariff will be applied to the first complete billing cycle after receipt of the written request. The customer shall be allowed to change to the time of use rate once and to change back to a General Service rate once each during any twelve (12) month period.

All electric service is subject to any applicable franchise fees and/or sales taxes.

DETERMINATION OF BILLING DEMAND

The billing demand shall be the single, highest kilowatt load used by the customer for any period of fifteen (15) consecutive minutes during the month, or portion thereof, for which the bill is rendered, as indicated or recorded by a demand meter.

POWER FACTOR

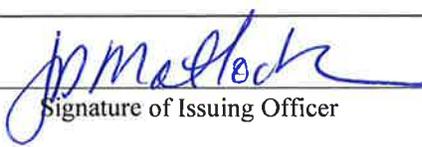

The Association reserves the right to measure the power factor at any time. Should such measurements indicate that the power factor at any time is less than 95%, the owner of the load will be given 90 days to correct the power factor to 95%. If the power factor remains uncorrected after 90 days, the Association will install facilities to correct the power factor of the load to at least 95% and bill the owner for the cost of such facilities.

ASSOCIATION PROVIDED LOAD CONTROL SIGNAL

The Association will provide a load control signal wire originating at the customer's meter at no charge to customers controlling ETS heaters, water heaters or other large electric loads. A charge, or close, signal will be active only during off peak hours. The charge, or close, signal will be active a minimum of 12 hours each day. Should such measurements indicate that the power factor at any time is less than 95%, the owner of the load will be given 90 days to correct the power factor to 95%. If the power factor remains uncorrected after 90 days, the Association will install facilities to correct the power factor of the load to at least 95% and bill the owner for the cost of such facilities.

MINIMUM CHARGE

Minimum annual or monthly charges shall be established by special contractual arrangements with each customer. The term of the contract and the monthly minimum charges shall be determined by the cost of providing service in accordance with the provisions of the extension policy. In no event will the monthly minimum charge be less than \$75. Payment of the contractual minimum charge shall entitle the customer to the use of capacity and/or energy corresponding to the minimum charge in accordance with the foregoing rate.

TERMS OF PAYMENT

Statement payable within twenty (20) days from statement date.

POWER FACTOR

The Association reserves the right to measure the power factor at any time. Should such measurements indicate that the power factor at any time is less than 95%, the owner of the load will be given 90 days to correct the power factor to 95%. If the power factor remains uncorrected after 90 days, the Association will install facilities to correct the power factor of the load to at least 95% and bill the owner for the cost of such facilities.

MINIMUM CHARGE

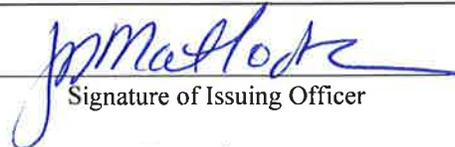

Minimum annual or monthly charges shall be established by special contractual arrangements with each large commercial customer. The term of the contract and the annual or monthly minimum charges shall be determined by the cost of providing service in accordance with the provisions of the extension policy. Payment of the contractual minimum charge shall entitle the customer to the use of capacity and/or energy corresponding to the minimum charge in accordance with the foregoing rate. The monthly facilities charge covers fixed costs associated with maintaining facilities ready to serve customer load. Payment of this fee does not entitle the customer to the use of any energy or capacity.
